

IsNumeric Built In Function

WhWhiteTech.Com

```
Case "UnitCost" ' Case is the selected column's title
' Ensure that the entered values for quantity and unit cost are numeric. If numeric, then
If IsNumeric(DataGridView5.CurrentRow.DataBoundItem(SelectedColumnName)) Then
' update the selected record's data
Call UpdateDatabaseDouble("MaterialList", "MaterialListID",
    DataGridView5.CurrentRow.DataBoundItem("MaterialListID"),
    SelectedColumnName.ToString.Replace(" ", ""),
    DataGridView5.CurrentRow.DataBoundItem(SelectedColumnName))
' Update the cell's value to the desired format
Me.DataGridView5.Rows(DataGridView5.CurrentCell.RowIndex).Cells(SelectedColumnName).Value =
    FormatNumber(DataGridView5.CurrentRow.DataBoundItem(SelectedColumnName), 3)
Else ' else, pop up a message that the values must be numeric
    MsgBox("Values entered for " & SelectedColumnName & " must be numeric.")
End If
```
